

1. Create the following schema.

2. Insert 5 rows in the jobs, dependents, regions, countries, locations, departments tables and 10 rows in the Employee table.

3. Column:

- In departments table, add a new field 'manager_name' of type VARCHAR
- REMOVE field max_salary from jobs.
- In the locations table, rename postal_code column to pincode.

4. Constraints:

- First_name and last_name should not be null
- Min_salary must be greater than 1000
- Max length of postal_code should be 10.
