

RDBMS assignment on basic queries

For the given schema, write SQL queries to perform the following:

1. Select all records in table “Employees” whose last name starts with ‘Sah’
2. Select 10 employees who were hired between 1st June, 2021 to 15th February, 2022. Start retrieving from the 4th record in the table
3. Find distinct top 5 salary values (only salary column), using alias for column as “Top 5 salaries”
4. Find first_name, last_name and email of employees from the employees table where salary lies between 25000 to 45000
5. Write a query to find first_name, manager_id and salary where the department_id is 101 and sort the result in ascending order of salary.
6. Find all the first_name that start with the letter “A”, and find all the last_name that have “TH” in the 2nd and 3rd positions.
