1. What are the main features of redis?
2. Write down the limitations of redis?
3. Perform a basic CRUD operation using redis.
4. Explain TTL command with an example.
5. **Create a transaction** in redis to perform the following operations.
   - Create two keys in a single line and one key differently. (one value should be number)
   - Read any two value in a single line
   - Increment the number value
   - Expire any two keys after some time
